

FluenceXL

Tools like Power BI and Tableau can deliver great dashboards, but don't provide the fine grain formatting control and ad-hoc capabilities today's finance teams demand. FluenceXL extends data-connected Excel to give users the flexibility they need, in the environment they love.

Excel for Reporting & Analytics

Most reporting tools try to replace Excel, but in truth it's going nowhere and 'save to Excel' is often used to fill the gaps. FluenceXL extends data-connected Excel in analysis, reporting and dashboards, giving Finance users the self-serve capabilities needed to meet today's challenging delivery time frames.

Interactive, Controlled Reporting

FluenceXL provides the governance and scalability IT requires with the agility finance users need. Share Excel-authored, data-connected reports and dashboards with web and mobile users across the organization in seconds – with the permissions, validations and controls to deliver trusted, timely insights.

Visual Analytics in Excel, Web & Mobile

Our library of finance focused dynamic charts helps users elevate their financial reporting with intuitive waterfall and variance charts. The charts connect directly to underlying data, reducing maintenance, and can easily be shared with web and mobile users.

Fast, Flexible, Intuitive

With over 30 built-in connectors, report on real-time metrics directly from TM1, Power BI, SQL Server Analysis Services and more. Deliver trusted, timely insights with permissions, validations and controls. Ensure integrity and governance by leaving your data where it belongs - at the source.
